

## Fluency Review Template

This is a full pdf updated with all of my lessons.

**Name:** Kirk mortenson

Week 5

Lesson 1

**Coding Topic:** JavaScript - Loops, Conditional Statements, Functions, Variables, Parameters, Arrays, and Associative Arrays.

**Description of Understanding:** This is a topic I am familiar with I've done some basic coding to show my understanding of how Loops, Conditional Statements, Functions, Variables, are used the functions utilize parameters and I show my understanding of Arrays and objects forming Associative Arrays.

I'm using CodePen to embed my code in the website. This allows you to look at the JavaScript, the CSS and the HTML as well as the result. You can use the buttons at the top of the form to toggle through the items or click on the EDIT on CodePen icon on the right top of the form to open to a full screen version.

### Teaching Video:

**Starting at:** Video is the full lesson

**Also integrated with:** I am utilizing JavaScript in many of the other lessons currently submitted JSON and Manipulating Class properties as well as the navigation menu of the website.

File	Website link	What should I be looking for?	Sandbox or Your code?
Website JavaScript Page	<a href="https://kmortenson.github.io/kmortenson.github.io/CIT-261-Mobile-Application-Development/javascript.html">https://kmortenson.github.io/kmortenson.github.io/CIT-261-Mobile-Application-Development/javascript.html</a>	Lesson 1 functions utilizing various JavaScript code	My code

Week 6

Lesson 3

**Coding Topic:** JSON parse and Stringify

**Description of Understanding:** Parse and Stringify operations are fairly basic. I have used JSON for Web design and in applications to store data in languages like Java, JavaScript and C#. Putting together the lesson for the class I reached out to multiple websites and books to see if there was any additional information I could insert into the lesson. I learned a lot more about the JSON file system but I decided to keep the lesson focused on Parse and Stringify to remain on scope.

I'm using CodePen to embed my code in the website. This allows you to look at the JavaScript, the CSS and the HTML as well as the result. You can use the buttons at the top of the form to toggle through the items or click on the EDIT on CodePen icon on the right top of the form to open to a full screen version.

Week 7  
Lesson 4

**Coding Topic:** AJAX requesting a JSON file

**Description of Understanding:** I've used AJAX in JavaScript for web design as well as C# for data and Java. I like how streamlined using AJAX is having it able to update without reloading the page. In this function I wanted to use an external source. I found an interesting site called IPinfo.io and utilized the JSON it produces. I still did a bit of reading to round out my knowledge and to better understand how Ajax works.

I'm using CodePen to embed my code in the website. This allows you to look at the JavaScript, the CSS and the HTML as well as the result. You can use the buttons at the top of the form to toggle through the items or click on the EDIT on CodePen icon on the right top of the form to open to a full screen version.

Week 7

Lesson 7

**Coding Topic:** Manipulating CSS Class Properties Using JavaScript

**Description of Understanding:** I've used this in some of my web designs so I put together a quick bit of code that just changes the CSS class from one to another. I referenced a few websites and books and there is a lot you can do with JavaScript and CSS and changing HTML but changing the class is pretty simple. I am currently putting the PowerPoint together for class next week. I'll resubmit the page when I have the lesson Video.

I'm using CodePen to embed my code in the website. This allows you to look at the JavaScript, the CSS and the HTML as well as the result. You can use the buttons at the top of the form to toggle through the items or click on the EDIT on CodePen icon on the right top of the form to open to a full screen version.

**Teaching Video:** will be added when I give the lesson

**Starting at:**

**Also Integrated with:**

Week 8  
Lesson 10

**Coding Topic:** HTML5 Tags - Video, Audio, and Canvas

**Description of Understanding:** this is the first time I have utilized video, audio or Canvas. Utilizing the tags to import the files and understanding the controls as well as the file formats utilize by various web browsers, I found a great list on MDN. I MP4 and OGG for Video and MP3, OGG and WAV fir the Audio. I realized my video clip didn't have Audio but I think the Audio clip goes well with the video. I took the lesson primarily as utilizing the audio and video tags but I understand there are many other parameters like preloading and metadata but with preloading I understand the browser many times overrides your request for standard browser operation.

Canvas is huge I really like the flexibility of just creating and image utilizing code, I can geek out on this because I do a lot of work in CAD and G code. But the ability to insert images and even video into the canvas space is really neat. Of my stack of books from the library many have a full chapter on Canvas and one book is just about Canvas.

I'm using CodePen to embed my code in the website. This allows you to look at the JavaScript, the CSS and the HTML as well as the result. You can use the buttons at the top of the form to toggle through the items or click on the EDIT on CodePen icon on the right top of the form to open to a full screen version.
